What is IDMC?

IDMC usually refers to the **Internal Displacement Monitoring Centre**.

It's an international organization, founded in 1998, that specializes in collecting, analyzing, and publishing data about **internally displaced persons (IDPs)** — people who are forced to flee their homes due to conflict, violence, disasters, or human rights violations, but remain within their country's borders.

The IDMC is part of the Norwegian Refugee Council (NRC) and is headquartered in Geneva, Switzerland. Its work includes:

- **Tracking displacement** caused by conflict, disasters, and climate-related events.
- **Publishing annual and thematic reports** like the *Global Report on Internal Displacement (GRID)*.
- **Providing data** to governments, NGOs, and the UN for policy-making and humanitarian response.
- **Advocating** for solutions to prevent and address internal displacement.

If you're asking in a different context — for example, business, technology, or government — "IDMC" could also stand for other things, but in humanitarian and global affairs, this is the main meaning.

Do you want me to also list the other common meanings of "IDMC" in non-humanitarian contexts?

Machine Translation

The screenshot shows the Google Translate website. At the top, there's a navigation bar with the Google Traduction logo, settings, and a 'Connexion' button. Below this is a row of buttons for 'Texte', 'Images', 'Documents', and 'Sites Web'. The main interface has two language selection tabs: 'Français - Détecté' (active) and 'Français', 'Anglais', 'Arabe'. The source text in French is: 'Les questions que soulève la science du langage, dans toutes ses versions, sont des questions fines : une proposition de linguistique concerne peu de données à la fois et elle y fait apparaître généralement ce que l'opinion courante tiendrait pour des détails'. The translated text in English is: 'The questions raised by the science of language, in all its versions, are fine questions: a linguistic proposition concerns a few data at a time and it generally reveals what current opinion would consider to be details.' The interface also includes a 'Rechercher des détails' link, a character count '259 / 5000', and a 'Envoyer des commentaires' link at the bottom right.

Today's NLP

Why it's important?

Ben Hamner  @benhamner · Oct 9

Programming: 10% writing code. 90% figuring out why it doesn't work

Analyzing data and ML: 1% writing code. 9% figuring out why code doesn't work. 90% figuring out what's wrong with the data

89

1.9K

8.7K

Why it's important? in real life

"Manual inspection of errors in the CIC-ES and CIC-CAT datasets revealed that a substantial portion of misclassifications were due to dataset quality issues rather than model shortcomings. In our annotated sample, approximately 60% of errors in both languages were attributable to incorrect labels or tweets that were unrelated to the topic of Catalan independence. [...]"

"These findings highlight a critical point: much of the perceived model underperformance may be due to label inconsistencies and annotation errors. In fact, the evaluated LLMs may be classifying better than the raw scores indicate. However, confirming this hypothesis would require systematic re-annotation or cleaning of the CIC dataset. " [Masters' thesis of Summer Devlin, M2 student in 2025]

Penn Treebank (PTB) [Marcus et al., 1993]

Treebank from the University of Pennsylvanie

PTB 1:

- ▶ correcting automatic POS-tagging: ? words per hour, ? hours a day
- ▶ correcting automatic parsing: ? words per hour, ? hours a day

Penn Treebank (PTB) [Marcus et al., 1993]

Treebank from the University of Pennsylvanie

PTB 1:

- ▶ correcting automatic POS-tagging: 3,000 words per hour, ? hours a day
- ▶ correcting automatic parsing: ? words per hour, ? hours a day

Penn Treebank (PTB) [Marcus et al., 1993]

Treebank from the University of Pennsylvanie

PTB 1:

- ▶ correcting automatic POS-tagging: 3,000 words per hour, 3 hours a day
- ▶ correcting automatic parsing: ? words per hour, ? hours a day

Penn Treebank (PTB) [Marcus et al., 1993]

Treebank from the University of Pennsylvanie

PTB 1:

- ▶ correcting automatic POS-tagging: 3,000 words per hour, 3 hours a day
- ▶ correcting automatic parsing: 750 words per hour, ? hours a day

Penn Treebank (PTB) [Marcus et al., 1993]

Treebank from the University of Pennsylvanie

PTB 1:

- ▶ correcting automatic POS-tagging: 3,000 words per hour, 3 hours a day
- ▶ correcting automatic parsing: 750 words per hour, 3 hours a day

Penn Treebank (PTB) [Marcus et al., 1993]

Treebank from the University of Pennsylvanie

PTB 1:

- ▶ correcting automatic POS-tagging: 3,000 words per hour, 3 hours a day
- ▶ correcting automatic parsing: 750 words per hour, 3 hours a day
- + learning curve of 1 (POS-tagging) to 2 months (syntax)!

Prague Dependency Treebank [Böhmová et al., 2001]

corpus annotated in dependency syntax from Charles' University

- ▶ 1996-2004 [Böhmová et al., 2001],
- ▶ built from the CNC (*Czech National Corpus*),
- ▶ 3 levels of structure:
 1. morphological (semi-automatic): 1.8 million tokens
 2. analytical (dependency syntax, with an adapted tool)
 3. tectogrammatical (semantic): 1 million tokens

Prague Dependency Treebank [Böhmová et al., 2001]

Version 1.0:

- ▶ manual annotation of the morphological and analytical levels
- ▶ time: ?
- ▶ nb of persons involved: ?
- ▶ Cost estimate: ?

Prague Dependency Treebank [Böhmová et al., 2001]

Version 1.0:

- ▶ manual annotation of the morphological and analytical levels
- ▶ time: 5 years
- ▶ nb of persons involved: ?
- ▶ Cost estimate: ?

Prague Dependency Treebank [Böhmová et al., 2001]

Version 1.0:

- ▶ manual annotation of the morphological and analytical levels
- ▶ time: 5 years
- ▶ nb of persons involved: 22 persons, incl. 17 simultaneously during pick periods
- ▶ Cost estimate: ?

Prague Dependency Treebank [Böhmová et al., 2001]

Version 1.0:

- ▶ manual annotation of the morphological and analytical levels
- ▶ time: 5 years
- ▶ nb of persons involved: 22 persons, incl. 17 simultaneously during pick periods
- ▶ Cost estimate: \$600,000

GENIA [Kim et al., 2008]

GENIA: 400,000 words annotated in microbiology.

GENIA [Kim et al., 2008]

GENIA: 400,000 words annotated in microbiology.

⇒ 5 half-time annotators, 1 senior coordinator, 1 junior coordinator during 1.5 year [Kim et al., 2008]

GENIA [Kim et al., 2008]

GENIA: 400,000 words annotated in microbiology.

⇒ 5 half-time annotators, 1 senior coordinator, 1 junior coordinator during 1.5 year [Kim et al., 2008]

⇒ Quality must be high!

ESTER

- ▶ 100h of transcribed speech (evaluation campaign ESTER on transcription systems, 2008)
- ▶ 1h of speech = ?

ESTER

- ▶ 100h of transcribed speech (evaluation campaign ESTER on transcription systems, 2008)
- ▶ 1h of speech = ? between 20 and 60h of transcription work

Today's NLP

Manual annotation and NLP

Manual annotation in NLP

A notoriously costly endeavour

About language resources longevity

What is annotating about ?

How to do this properly?

WYMR: What You Must Remember

Lifespan of annotated corpora

Penn Treebank [Marcus et al., 1993] :

- ▶ created at the beginning of the 90s
- ▶ still used (ACL 2022)

vs PARTS POS-tagger [Church, 1988], used to pre-annotate the corpus, which is not more used or even known

→ rapid evolution of tools

⇒ manual annotation should **not** depend on them/their performance

Today's NLP

Manual annotation and NLP

What is annotating about ?

- Exercise

- DefinitionS

- Annotating, what for?

How to do this properly?

WYMR: What You Must Remember

Exercise

Transcribe what you hear (the file I'll be playing), using Praat (if you have it installed) or on a simple text file, or even on paper (yes)

Definition

*“[corpus annotation] can be defined as the practice of adding **interpretative**, linguistic information to an electronic corpus of spoken and/or written language data. ‘Annotation’ can also refer to the end-product of this process” [Leech, 1997]*

*“‘Linguistic annotation’ covers any **descriptive** or **analytic** notations applied to raw language data. The basic data may be in the form of time functions - audio, video and/or physiological recordings - or it may be textual.” [Bird and Liberman, 2001]*

Annotation

Annotation

Adding [interpretative](#) information [Leech, 1997, Habert, 2005]

The application: horizon of the annotation

An annotation is always *task-oriented* [Habert, 2000].

- ▶ direct applicative purpose (summaries of football matches for the football campaign)
- ▶ intermediary application or internal to NLP application (POS-tagging)

[T]he annotations are more useful, the more they are designed to be specific to a particular application [Leech, 2005].

Exercise: annotate soccer match comments

players, teams, actions (goals), relations (passes), etc.

With a huge surprise from the side of Bayern Munich as Van Bommel, the captain, has been removed. He is not even on the substitutes list.

Exercise: annotate soccer match comments

players, teams, actions (goals), relations (passes), etc.

*With a huge surprise from the side of Bayern Munich as Van Bommel, the captain, has been **removed**. He is not even on the substitutes list.*

What is the task, the application aimed at?

summary of match

Van Bommel?

should **not** be annotated

The consensus, at the heart of annotation

One needs to "agree to be able to measure" [Desrosières, 2008]

Annotation is related to **quantification**

Measuring vs quantifying [Desrosières, 2008] :

- ▶ **measuring**: implies a measurable form (eg. the height of Mont Blanc)
- ▶ **quantifying**: implies preliminary conventions of equivalence

The consensus should be equipped:

- ▶ annotation guidelines (12p. for soccer)
- ▶ meetings with the annotators and the campaign manager
- ▶ **evaluate** the consensus (consistency)

Today's NLP

Manual annotation and NLP

What is annotating about ?

How to do this properly?

- Good Practises

- Theorizing

WYMR: What You Must Remember

Leech's 7 maxims [Leech, 1993]

1. It should always be possible to come **back** to initial data (example BC). Note: can be hard after normalization ("l'arbre" → "le arbre", etc.)

Leech's 7 maxims [Leech, 1993]

1. It should always be possible to come **back** to initial data (example BC). Note: can be hard after normalization ("l'arbre" → "le arbre", etc.)
2. Annotations should be **extractable** from the text

Leech's 7 maxims [Leech, 1993]

1. It should always be possible to come **back** to initial data (example BC). Note: can be hard after normalization ("l'arbre" → "le arbre", etc.)
2. Annotations should be **extractable** from the text
3. The annotation procedure should be **documented** (ex: **Brown Corpus annotation guide**, **Penn Tree Bank annotation guide**)

Leech's 7 maxims [Leech, 1993]

1. It should always be possible to come **back** to initial data (example BC). Note: can be hard after normalization ("l'arbre" → "le arbre", etc.)
2. Annotations should be **extractable** from the text
3. The annotation procedure should be **documented** (ex: **Brown Corpus annotation guide**, **Penn Tree Bank annotation guide**)
4. Mention should be made of the **annotator(s)** and the way annotation was made (manual/automatic annotation, number of annotators, manually corrected/uncorrected...)

Leech's 7 maxims [Leech, 1993]

1. It should always be possible to come **back** to initial data (example BC). Note: can be hard after normalization ("l'arbre" → "le arbre", etc.)
2. Annotations should be **extractable** from the text
3. The annotation procedure should be **documented** (ex: **Brown Corpus annotation guide**, **Penn Tree Bank annotation guide**)
4. Mention should be made of the **annotator(s)** and the way annotation was made (manual/automatic annotation, number of annotators, manually corrected/uncorrected...)
5. Annotation is an act of **interpretation** (cannot be infallible)

Leech's 7 maxims [Leech, 1993]

1. It should always be possible to come **back** to initial data (example BC). Note: can be hard after normalization ("l'arbre" → "le arbre", etc.)
2. Annotations should be **extractable** from the text
3. The annotation procedure should be **documented** (ex: **Brown Corpus annotation guide**, **Penn Tree Bank annotation guide**)
4. Mention should be made of the **annotator(s)** and the way annotation was made (manual/automatic annotation, number of annotators, manually corrected/uncorrected...)
5. Annotation is an act of **interpretation** (cannot be infallible)
6. Annotation schemas should be as **independent** as possible on formalisms

Leech's 7 maxims [Leech, 1993]

1. It should always be possible to come **back** to initial data (example BC). Note: can be hard after normalization ("l'arbre" → "le arbre", etc.)
2. Annotations should be **extractable** from the text
3. The annotation procedure should be **documented** (ex: **Brown Corpus annotation guide**, **Penn Tree Bank annotation guide**)
4. Mention should be made of the **annotator(s)** and the way annotation was made (manual/automatic annotation, number of annotators, manually corrected/uncorrected...)
5. Annotation is an act of **interpretation** (cannot be infallible)
6. Annotation schemas should be as **independent** as possible on formalisms
7. No annotation schema should consider itself a standard (it possibly becomes one)

Different points of view

“you only get out what you put in” [Wallis, 2007]

Model-based approach

Knowledge is in the annotation schema $\Rightarrow$ corpus comes after

Everything is in the annotation!

Corpus-based approach

Knowledge is in the text $\Rightarrow$ the corpus comes first [Sinclair]

Third way?

The knowledge is in the annotation schema **and** in the corpus

Annotation by cycles

- ▶ new observations generalize hypotheses
 - ▶ theory allows to interpret and classify information
 - ▶ **evolving** cycles: each cycle improves the knowledge by refining and testing the theories on real data
- ⇒ a **more precise** representation of the corpus is built and a **more sophisticated** system is produced

Agile Annotation

integrating evaluation

Traditionnal annotation phases (left) and cycles of agile annotation (right).
Reproduction of Figure 2 from [Voormann and Gut, 2008]

Generic annotation pipeline [Hovy and Lavid, 2010]

MATTER cycle [Pustejovsky and Stubbs, 2012]

Towards "annotation engineering" [Fort, 2012]

Methodology: some basic principles

- ▶ compute the **inter-annotator agreement** at the very beginning of the annotation campaign, then update the annotation guidelines [Bonneau-Maynard et al., 2005].
- ▶ compute the **intra-annotator agreement** as the campaign unfolds, to check that the annotators annotate consistently [Gut and Bayerl, 2004].
- ▶ go as far as doing **agile annotation** [Voormann and Gut, 2008, Alex et al., 2010], that implies several iterations

Manual annotation and NLP:

- ▶ usage / importance
- ▶ cost

Manual annotation:

- ▶ definition
- ▶ it's an interpretation

Practice: Manually annotate your corpus with POS

- ▶ Which tagset to use?
- ▶ Which tool?
- ▶ Who annotates what?
- ▶ How much time does it take you?
- ▶ How do you evaluate the quality of your annotations?
